EDUCATION:

Northeastern University, MA

Sep 2023 – May 2027

Khoury College of Computer Sciences

Candidate for Bachelor of Arts in Computer Science, Concentrating in Artificial Intelligence

Relevant Coursework: Fundamentals of Software Engineering | Object Oriented Design | Machine Learning & Data Mining

Activities: Women in Technology | Electric Racing | Oasis | CTF Club | Digital Illustration Association

SKILLS:

Languages: Python, HTML/CSS, JavaScript, TypeScript, Java, C/C++, C#, LaTeX, Bash, SQL

Frameworks & Libraries: React, Node.js, Django, NumPy, Pandas, TensorFlow, PyTorch, Scikit-learn, Keras, Matplotlib

Technologies: Git, MongoDB, Kubernetes, Datadog, Postman, Google Cloud Platform, Docker

PROFESSIONAL EXPERIENCE:

Software Engineer Co-op

Boston, MA

Boston Red Sox

Jul 2026 – present

- Developed and shipped features and fixes for an internal ticketing application using Python and Django, enhancing ticket workflows, inventory, administrative tools, and user interfaces serving 1000+ active users
- Implemented business rules for approval routing, request status transitions, ticket limits, combo ticket requirements, and validation of pending approval requests
- Engineered inventory logic to calculate event availability and enforce ticket limits, including adding good, low, and sold out availability statuses
- Expanded Django administrative tools with searchable, filterable, and sortable views, audit logging, processing timestamps, and additional request and customer information; resolved related application and UI bugs

Machine Learning Engineer Co-op

Boston, MA

Wayfair

Jul 2025 – Dec 2025

- Engineered production pipelines to export 4k+ daily scam feedback records via REST APIs, while integrating Datadog metrics and BigQuery logging to provide end-to-end visibility
- Slashed Keycloak (IAM) authentication load by 98% by utilizing caching, cutting daily requests from 180k to 3k and eliminating redundant auth overhead
- Accelerated model performance by ~31% by migrating services to Gemini 2.5-flash-lite and implementing JSON response schemas, achieving output reliability; used Unleash feature toggles for systematic A/B testing
- Streamlined MLOps workflows by architecting custom Docker environments and implementing observability handlers; successfully deprecated legacy services to reduce technical debt and infrastructure costs

STEM Instructor

Franklin, NJ

International Ivy

Jul 2024 – Aug 2024

- Instructed 50+ children ages 5-14 in 3D printing, robotics, and programming using Scratch and Python, fostering foundational computational thinking

PROJECTS:

GameNite

Jan 2026 - Apr 2026

- Developed an interactive web application including multiplayer games and real-time private/group messaging using React, TypeScript, and CSS, with automated test suites in Vitest, Jest, and Playwright.
- Led a full redesign of the website with light/dark mode, cohesive color/font themes, and enhanced user profiles
- Created a coin system for game wins and an in-app store allowing users to customize chats and profile elements

Stock Simulator

Jun 2024

- Engineered a stock trading simulator in Java with CLI and GUI interfaces, with Alpha Vantage API integration following an MVC architecture
- Implemented real-time stock data retrieval allowing users to make transactions, as well as manage, save, and load a stock portfolio
